Re: Turkey Point Unit 4
Docket No. 50-251
Generic Letter 96-01
Testing of Safety-Related Logic Circuits

On January 10, 1996, the NRC issued Generic Letter (GL) 96-01, "Testing of Safety-Related Logic Circuits," requesting licensees to perform a detailed review of the design of logic circuits against Technical Specification required test procedures to verify the adequacy of those test procedures. By letter L-96-084, dated April 12, 1996, Florida Power and Light Co. informed the NRC that it would complete GL 96-01 Requested Actions for Unit 4 prior to restart from the September 1997 Unit 4 refueling outage.

GL 96-01 Requested Action (1) requested licensees to perform a comparison of electrical schematic drawings and logic drawings for the reactor protection system, diesel generator load shedding and sequencing, and actuation logic for the engineered safety features systems against plant surveillance test procedures to ensure that all portions of the logic circuitry, including the parallel logic, interlocks, bypasses and inhibit circuits, are adequately covered in the surveillance procedures to fulfill the Technical Specification requirements. GL 96-01 Requested Action (2) requested licensees to modify surveillance procedures, as necessary, for complete testing to comply with the Technical Specifications.

As requested by GL 96-01 Required Response item (2), this letter confirms completion of the GL 96-01 Requested Actions (1) and (2) for Unit 4.

Should there be any questions on this response, please contact us.

Very truly yours,

R. J. Hovey
Vice President
Turkey Point Plant
