Subject: [External_Sender] Lost Creek Unplanned Release 11407
Date: Monday, May 22, 2017 4:38:08 PM

An unplanned release was discovered by the Wellfield Operations Supervisor on May 22, 2017 at the Lost Creek ISR Project (PT788/SUA-1598) site. The release of injection fluid was estimated at 707 gallons based on the area and depth of affected surface. The release was reported on the WDEQ-LQD spill report website spill ID 170522-1414.

The release originated from a leaking fitting on the injection well head piping. The well was shut-in until the repair can be made. Further details will be provided in the pending written report.

If you have any questions, please contact me.
