General Comment

I honestly can't believe that these thin canisters are even being considered. On so many levels. The moist, salty environment. The proximity to the ocean with only a delapidated tsunami wall. We have to look at long term. What would be the next step? Nuclear waste was never meant to be stored here but if it is it needs to be stored into something safe so it came entually be moved. There are thousands of families that would be exposed to radiation from this waste. Put it into proper containers and get it out of here!
