## General Comment

I request the window for public comment be extended as the public was not given reasonable notification to review the document and comment. As Southern California Edison received a license from the California Coastal Commission to bury 3.55 million pounds of radioactive nuclear waste, 108 feet from the ocean, near an earthquake fault, in a tsunami zone, at the water table - something has fallen through the cracks of your evaluation processes and procedures. As I live within 50 miles of the plume zone, I ask that this license be revoked, that the nuclear waste be put in safer canisters, and moved to a safer location. The 5/8" walled canisters are said to last 25 years, which is not enough time. We need to make a plan that will keep our next 7 generations safe... not 25 years. Please make decisions to protect our planet and humanity.
