General Comment

RE: Docket ID NRC-2017-0211

The NRC needs to be more responsible regarding this review in many ways. For starters, the NRC should have the decency and common sense to extend this review past the 1st business day after the holiday break. That insensitivity clearly demonstrates why the NRC's lacks the moral fortitude to abide by its own mission to "ensure adequate protection of public health and safety and the environment". The NRC has acted irresponsibly by continuing to enable Edison to buy thin-wall welded cans, that sit smack on an earthquake fault & in a tsunami zone, cannot be monitored, inspected for radiological leaks, positioned in the middle of millions of people & feet from an Interstate highway & the 2nd busiest rail corridor in the United States. Get real and be responsible! History is watching who's putting their name to the NRC document.
