## General Comment

I do not approve of the burial of toxic waste here in my community. This is a serious health and environment issue.

Another is my community said it best:

"It is public knowledge that So Cal Eddison plans to bury the toxic waste 108 feet from our coastline, only a few feet above the water table putting the public at high risk if there is a tsunami or if the water table continues to rise. We call upon the NRC to put public safety first and require SCE to move the waste to higher ground at Camp Pendleton. Please require SCE to move the waste where it is out of the tsunami zone, away from the freeway, and off of an earthquake fault line and deny So Cal Edison's pending license for the ISFSI at San Onofre.

We, the people of Southern California, Americans and citizens of the world put our trust in you at the NRC to require the highest possible safety regulations for this extremely lethal, long lasting, radioactive material. Thank you for putting public safety before special interests."

I stand with her 100% and ask that you require SCE to find a different location and deny So Cal Edison's pending license for the ISFSI at San Onofre.  
Do not allow this to happen to our home and our coast line.
