EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 2 | During steady state operation, routine review of the differential
0 3 | recorder revealed that the condenser inlet/screenwell discharge
0 4 | differential temperature was over established limits for more than
0 5 | 8 hours in a 24 hour period. Since subsequent review of the event
0 6 | indicated that it was caused by calibration of equipment rather
0 7 | than actual temperatures, there were no significant effects on
0 8 | the environment.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1	0	Investigation of the problem indicated that the problem was with the
1	1	instrumentation rather than the temperature itself. Recalibration
1	2	of the transmitter feeding the diff. recorder brought the indicated
1	3	output within limits. Procedures are being revised to provide for
1	4	more frequent monitoring of the equipment.
