EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

02	During normal operation while performing a monthly Fire System Preventative Maintenance
----	---

033 Test it was found that the Electric Fire Pump failed to start. This had no significant

04 | safety concerns since the alternate Fire Pump was available and the item was readily

corrected with the Pump being returned to service in approximately two hours.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

110 | The inability to start was found due to a broken prop spring in the 4160V motor

111 breaker. This item was readily replaced which resulted in satisfactory pump

initiation and operability.

1

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group (C) and the experimental group (E). The control group was divided into two subgroups: the control group (C) and the control group (C). The experimental group was divided into two subgroups: the experimental group (E) and the experimental group (E). The control group (C) was divided into two subgroups: the control group (C) and the control group (C). The experimental group (E) was divided into two subgroups: the experimental group (E) and the experimental group (E).
