FILE 288

Docket Nos. 50-387
50-388

Dear Mr. Schwencer:

In response to a recent inquiry from your staff regarding Susquehanna SES Feedwater piping outside the reactor building, PP&L offers the following information:

- o Feedwater piping in the turbine building is separated from essential systems and components.
- o The high energy feedwater piping has been seismically analyzed up to and beyond the point where Main Steam Class I piping and the feedwater piping separate in the reactor building. Seismic analysis of the high energy feedwater piping extends into the turbine building.
- o Main steam piping runs through the turbine building main steam pipe tunnel, resulting in total separation from the feedwater piping in that area.

If you have any other questions, please contact us.

Very truly yours,

N. W. Curtis
Vice President-Engineering & Construction-Nuclear
