Subject: RE: Comments for Docket ID NRC-2016-0238 NUREG/CR 2214
Date: Friday, February 16, 2018 6:23:48 AM

Donna,

Regarding your correspondences on December 21 and 26, the NRC staff is considering all of your comments on the aging of dry storage systems as we prepare the final NUREG-2214 report.

The NRC received many comments on the draft report, and the staff is in the process of performing technical evaluations of each comment to determine whether (and how) the concerns should be reflected in the final report. A comment response document will accompany the release of the final report to summarize these evaluations and their impact on the report. Also, the NRC is considering holding a public meeting to discuss the comments, and we will keep you informed should this occur.

Finally, your December 23 correspondence requested that the NRC post a particular meeting summary on the NRC website. The spent fuel storage Public Involvement page has been used by some meeting coordinators to advertise meetings by posting meeting details and supporting materials. However, as you found, not all meeting coordinators chose to use this site to advertise meetings – including those to specifically discuss stainless steel stress corrosion cracking. We will be considering your request in light of the resources needed to populate the site with older meeting materials.

Thank you for your comments,

John
