Subject: Summary of Call with NEI

On February 15, 2018, NRC staff had a call with representatives of NEI. The purpose of the call was to discuss anticipated schedule and resource impacts associated with the inclusion of Class 1 piping within the scope of 10 CFR 50.69 LARs. During the call the following items were discussed:

- Purpose of the call is to discuss scheduler impacts associated with inclusion of Class 1 piping in 10 CFR 50.69 LARs
- NRC has had consistent messaging on risk-informed initiatives that our ability to be successful and meet initial schedules is dependent on adherence to guidance and established precedent
- Deviations from guidance and precedent such as inclusion of Class 1 piping represent a project schedule risk for in-house reviews
- It is generally more efficient to explore deviations outside of plant-specific reviews
- Solutions developed by these interactions could then be applied through plant-specific LARs
- NRC staff indicated that another way of addressing new issues would be to “pilot” the issue on a single plant-specific review on a longer schedule
- Using a single plant to “pilot” the issue would allow the remainder of the in-house reviews to maintain their existing review schedules
