U.S. Nuclear Regulatory Commission  
Attn: Document Control Desk  
Washington, DC 20555

Gentlemen:

**REVIEW AND APPROVAL OF REVISED EMERGENCY ACTION LEVELS FOR BOTH  
SALEM AND HOPE CREEK GENERATING STATION  
DOCKET NOS. 50.272, 50-311, 50-354**

Public Service Electric and Gas Company (PSE&G) hereby provides, for your review and approval, the Salem and Hope Creek Generating Station Emergency Action Level (EAL) documents, to which we refer as Event Classification Guides (ECG's), and their associated Technical Basis Documents. These documents are based on the approved methodology outlined in NUMARC/NESP-007, "Methodology for Development of Emergency Action Levels."

These documents have been reviewed by our Station Operation Review Committees (SORCs) and were determined to not involve any Unresolved Safety Questions and to not decrease the effectiveness of our Nuclear Business Unit's Emergency Plan. As required per Revision 3 to Regulatory Guide 1.101, "Emergency Planning and Preparedness for Nuclear Power Plants," these documents are submitted for NRC approval prior to implementation.

The following information is provided to support your review:

- Salem ECG Section 1 through 9 (EALs)
- Salem ECG Technical Basis (ECGTB)
- NUMARC EAL-to-Salem EAL comparison summary
- Hope Creek ECG Sections 1 through 9 (EALs)
- Hope Creek ECG Technical Basis (ECGTB)
- NUMARC EAL-to-Hope Creek EAL comparison summary

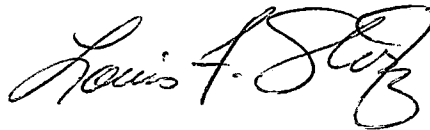

A review/training session has been conducted with the New Jersey and Delaware Emergency Management Organizations and the document draft was also reviewed by the New Jersey Bureau of Nuclear Engineering. PSE&G is requesting that the NRC review and approval be completed by October 31, 1995 to support our implementation goal of December 1, 1995.
