## EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 2 1 During normal power operation, manual valves 1-BD-8, 18, 28 were closed in an attempt to stop a leak in a service water line on which maintenance was being performed.

0 3 1 Closure of these valves terminated flow through the blowdown radiation monitors

0 4 1 (RM-SS-112, 113). This is contrary to Technical Specification 3.11.A.6 and is

0 5 1 reportable per Technical Specification 6.6.2.b.(2).

Docket No: 50-280

Report No: 78-042/03L-0

Event Date: 11/17/78

Title of Event: Blowdown Radiation Monitors Low Flow

1. Description of Event:

During normal power operation, manual valves 1-BD-8, 18, 28 were closed in an attempt to stop a leak in a service water line on which maintenance was being performed. Closure of these valves terminated flow through the blowdown radiation monitors (RM-SS-112, 113). This is contrary to Technical Specification 3.11.A.6 and is reportable per Technical Specification 6.6.2.b.(2).

2. Probable Consequences

Flow through the blowdown radiation monitors was interrupted for four to five minutes. The backup radiation monitor in the discharge tunnel remained operational during this interrupted period. Thus, the health and safety of the general public was not affected and there are no consequences of this event.

3. Cause of Event:

Operator error was the cause of the event. The closure of other valves could have provided leak isolation without interrupting flow to the blowdown radiation monitors.

4. Immediate Corrective Actions:

Upon discovering the discrepancy, the immediate operator action was to re-establish flow to the blowdown radiation monitors as required by Technical Specifications.

5. Subsequent Corrective Actions:

Appropriate personnel have been re-instructed in this matter.

6. Actions Taken to Prevent Recurrence:

None necessary.

7. Generic Implications:

None
