Docket No. 50-315
DPR No. 58

U.S. Nuclear Regulatory Commission
Office of Inspection and Enforcement
Region III
799 Roosevelt Road
Glen Ellyn, Illinois 60137

Attention: Mr. J. G. Keppler, Regional Director

Gentlemen:

Item 6 of IE Bulletin 75-04A requires a schedule for accomplishment of any revision to our policies and procedures and any proposed changes to the facility, to assure that consideration for alternate methods for accomplishing an orderly plant shutdown and cooldown are provided in case of loss of normal and preferred alternate shutdown and cooldown systems at the Donald C. Cook Nuclear Plant. Our letter to you dated June 27, 1975 provided this schedule.

In addition, Item 6 requests summary reports detailing our monthly progress. This letter is the fifth such monthly report. The four previous reports were dated July 30, August 27, September 30, and October 30, 1975.

A final draft emergency procedure for plant shutdown through local control has been written by the Cook Nuclear Plant Operations Department and forwarded to this office for review. The final procedure is scheduled to be reviewed and approved by January 15, 1976.

Mr. J. G. Keppler

- 2 -

November 25, 1975

A review by the AEPSC Change Control Board of the design change request to make local control possible is still pending. The general arrangement and layout of the local instrumentation panels to be installed to monitor critical parameters following loss of control from the control room have been outlined. Following the review of the change request, the design of these panels will be completed and procurement initiated. An installation schedule can be prepared when equipment delivery schedules are known.

Very truly yours,

R. S. Hunter

Vice President-Nuclear Engineering
