Re: Docket ID NRC-2018-0052: Proposed Holtec International HI-STORE Consolidated Interim Storage (CIS) Facility for

Spent Nuclear Fuel, Lea County, New Mexico

Good evening Nuclear Regulatory Commission:

Please find attached 73 petition signatures from New Mexicans who state "We Do Not Consent to the Risks and Dangers" to store ALL of the spent fuel rods from every commercial nuclear power reactor in the USA at the proposed Holtec Facility.

Please note: For the full pages (11 x 17 sheets) of signatures, we copied them from the top and the bottom - thus creating two 8 1/2 x 11 pages. As a result, there may be one or two duplicate signatures.

Please include this email and a print out of the attachment for inclusion in the Docket ID NRC-2018-0052 Administrative Record.

Please confirm you have received this email.

Sincerely,

Concerned Citizens for Nuclear Safety

Holtec International wants the Nuclear Regulatory Commission (NRC) to let them build a massive high-level radioactive waste storage facility between Carlsbad and Hobbs, New Mexico. This waste would be reprocessing wastes and **spent fuel rods from every commercial reactor in the country**. Since almost all the reactors are in the East, trains would bring in waste from nuclear reactors around the country for at least 20 years.

Transportation of high level waste (HLW) on this scale has never been done before and is extremely dangerous and expensive—especially since the entire rail system might have to be rebuilt to carry the enormous weight of the HLW casks. There are also questions about the safety of the thin-walled casks themselves which can't be inspected, and if found to be leaking, can't be repaired.

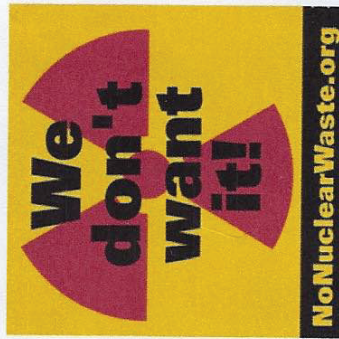

Since no disposal facility currently exists for this waste, would this interim "storage" site become a permanent disposal site? Or will this waste eventually end up in the Waste Isolation Pilot Plant (WIPP)? WIPP has currently requested five permit modifications including a modification to be able to receive high level waste.

To the NRC: WE DO NOT CONSENT to the risks and dangers from this facility. Without a final disposal facility it is premature to transport tens of thousands of fuel rods to New Mexico. This is an irresponsible and poorly thought-out plan with too many dangers to communities both along the transportation routes and in New Mexico. **Deny Holtec a license to store this waste!**

Holtec International wants the Nuclear Regulatory Commission (NRC) to let them build a massive high-level radioactive waste storage facility between WIPP and Hobbs New Mexico. This waste would be reprocessing wastes and **spent fuel rods from every commercial reactor in the country**. Since almost all the reactors are in the East, trains would bring in waste from nuclear reactors around the country for 20 years.

Transportation of high level waste (HLW) on this scale has never been done before and is extremely dangerous and expensive — especially since the entire rail system would have to be rebuilt to carry the enormous weight of the HLW casks. There are also questions about the safety of the thin-walled casks themselves.

Since there is currently no disposal facility for this waste, would this "storage" site end up being a disposal site? Or will this waste eventually end up in WIPP? (NMED currently has five modifications to the WIPP permit in play, including modifications for it to receive high level waste and to increase its size and the amount of waste it can receive.

To the NRC: WE DO NOT CONSENT to the risks and dangers from this facility. Without a final disposal facility it is premature to transport tens of thousands of fuel rods to New Mexico. This is an irresponsible and poorly thought-out plan with too many dangers to communities both along the transportation routes and in New Mexico. **Deny Holtec their license to store this waste right now!**
