Daniel,

I am wondering how, when or where we will get answers to questions posed by participants giving comment on the 2018 Indian Point Annual Assessment Report on the evening of Thurs., June 21 in Tarrytown, NY?

I specifically asked about standards for high burnup fuel: How long does it need to be kept in the fuel pools to be allowed to cool safely before transferring to dry cask storage?

Riverkeeper and others asked other very important questions, which we would like to have answered.

I am especially concerned because of the recent purchases/transfers of Oyster Creek, Pilgrim and Palisades nuclear power facilities and the large amount of highly radioactive nuclear waste that will be stored in fuel pools and dry cask storage on-site to the recently merged Holtec-SNC/Lavalin entity(ies). I am listening to the NRC Pre-Submittal Meeting with Exelon regarding the License Transfer of Oyster Creek Nuclear Generating Station and am concerned about the proposed timeline of as short as 2.5 years for decommissioning. We are even more concerned that transportation of nuclear waste would be extremely dangerous, if allowed. What

Please let us know where we can find answers to the questions and suggestions asked and offered at the recent Indian Point Annual Assessment meeting.

Many thanks,

Manna
