Dear Nuclear Regulatory Commission Staff:

There is a far better alternative to the removal, transport and temporary storage of irradiated material from our nuclear power plants, namely, developing on-site long-term, non-corrosive, above-ground dry cask storage.

Over the life of the radioactive waste, an annual or bi-annual inspection process, carried out by licensed staff, results in a public document certifying that the containment structure is sound. These reports can be summarized and communicated to the surrounding communities via public utility bills.

Local radioactive waste management is a much better alternative than trying to transport it across our country to a mammoth temporary or permanent waste storage facility. Our roads and railways, our rivers, lakes and aquifers, our meadows, fields, and farms will not be subject to such unnecessary risks.

Cordially,

Rebecca L. Ramsay
