Information Notice Re. Electrical Arc Flashes

On August 10, 2018, the staff issued information notice (IN) 2018-09, "Electrical Arc Flash Caused by Foreign Material Damages Fire Door" (Agencywide Documents Access and Management System Accession No. [ML18150A146](#)). The U.S. Nuclear Regulatory Commission (NRC) issued this IN to inform addressees of an event involving an electrical arc flash initiated by intrusion of foreign material into a switchgear cubicle. The arc flash resulted in a pressure wave that damaged a fire door serving as part of a three-hour-rated fire barrier assembly. The NRC expects recipients to review the information for applicability to their facilities and consider actions, as appropriate, to avoid similar problems.

Approval of American Society of Mechanical Engineers' Code Cases; Proposed Rule; Part 50 of Title 10 of the Code of Federal Regulations; Regulatory Identifier Number 3150-AJ93; NRC-2017-0024

On August 16, 2018, the U.S. Nuclear Regulatory Commission (NRC) published a proposed rule in the *Federal Register* ([83 FR 40685](#)) to amend its regulations to incorporate by reference proposed revisions of three regulatory guides (RGs), which would approve new, revised, and reaffirmed Code Cases published by the American Society of Mechanical Engineers. This proposed action would allow nuclear power plant licensees, and applicants for construction permits, operating licenses, combined licenses, standard design certifications, standard design approvals, and manufacturing licenses, to use the Code Cases listed in these draft RGs as voluntary alternatives to engineering standards for the construction, inservice inspection, and inservice testing of nuclear power plant components. The NRC is requesting comments on this proposed rule and on the draft versions of the three RGs to be incorporated by reference. Comments are due by October 30, 2018.
