COMMENT (3)
PUBLICATION DATE: 6/11/2018
CITATION: 83 FR 27033

Dear Governor Murphy

We commend you on your energetic leadership in serving New Jersey's families and communities. We are concerned, however, and ask you and your administration to protect the health and safety of our families, the ocean, coastal environment, and to preserve the aesthetic appeal of our community.

With the recent news release of the sale of the Oyster Creek plant by Exelon to Holtec, it has been announced that the decommissioning of the plant is proposed to be an eight year process, well below the previously stated 60 year timeframe. While this would be beneficial to Lacey Township and the surrounding Jersey Shore communities, the aggressive nature of this much shorter decommissioning timeframe creates some concerns and uncertainties among our community residents.

We understand that subject to NRC and BPU approvals, Holtec will own the plant, be responsible for the decommissioning obligation, and it will be transferred the Nuclear Trust Fund. In comparison to Exelon maintaining the decommissioning and financial obligations, having Holtec step in creates a number of risk factors that will require careful scrutiny and vetting. Among these risk factors are attaining letters of credit, financial sustainability, requisite insurance coverage, bonding, etc. The proper vetting of these and other risk factors are absolutely essential to insure the health and safety of our Ocean County residents, as well as the economic sustainability of the billion dollar tourist industry in the Barnegat Bay-Long Beach Island areas...not to mention all the other environmental factors involved. Governor Murphy, we are counting on your support and attention to these very important matters!

Thank you for reviewing our concerns (and the attached petition) on these extremely important matters! We hope that you will work with your legislative and environmental colleagues to ensure that Exelon, Holtec and any other involved companies will be held to their obligations to decommission the Oyster Creek nuclear plant in a timely, thorough and responsible manner. Your leadership is essential to ensuring the well-being of every family in our community and state!

Sincerely,
Ron Martyn, Chairman, Community Civic Affairs Group

Petition: Decommissioning of Exelon's Oyster Creek Nuclear Generating Station

We the undersigned residents of Lacey Township respectfully request that Governor Phil Murphy of New Jersey take actions to protect the health and safety of our families, to protect the sensitive ocean coastal environment, and to preserve the aesthetic appeal and character of our community in light of the decommissioning of Oyster Creek:

We respectfully request Governor Murphy:

- 1) Review the Oyster Creek Nuclear Generation Station Post Shutdown Activity Report (PSDAR), which was filed on May 15, 2018, to ensure decommissioning is completed safely and within as short a timeframe as possible. Exelon proposes to place the facility into a so-called Safe and Storage (SAFSTOR) condition and take 60 years to decommission the plant. Other nuclear facilities have completed decommissioning on approximate 20 year schedule. The extended decommissioning schedule proposed for Oyster Creek and continuing on site radioactive waste storage pose undue risks to New Jersey residents, the sensitive ocean coastal environment, and New Jersey shore tourism. The plant is located near sea level, ground zero for climate change, exposed to risks of rising sea levels, unpredictable natural events and Sandy type surges that may impact the site and cause spills and releases over the very long 60 year term.
- 2) Ensure that New Jersey citizens and electric ratepayers are protected from decommissioning financial default risks and cost impacts. Exelon is considering the sale of the plant and transfer of the decommissioning obligation to a third party contractor. Similarly, another nuclear generation company is in progress to sell the Vermont Yankee nuclear plant and transfer its decommissioning obligation to a contractor. Exelon as a technically competent nuclear plant owner operator and financially secure corporation is best able to execute the decommissioning in order to minimize performance and financial risks and protect ratepayers. The sale and transfer would allow Exelon to avoid its decommissioning obligation and benefit financially. In the case of future third party default, the burden of decommissioning and site restoration will fall on ratepayers and hard working New Jersey citizens. Exelon should be held to its responsibility and obligation to decommission Oyster Creek in a safe and timely manner.
