Subject: [External_Sender] Available Cash

Good morning,

I hope that the agency is about to begin a rigorous review of the finances available to SAFELY run the V.C. Summer Unit One plant. Current news presents the possibility that SCANA might have to give back all the money it charged for the V.C. Summer Unit 2 and Unit 3 failed construction. This has already caused a significant loss in their stock value.

My suggestion is to start with the idea that they DO NOT have sufficient money available and to seriously challenge each source of funds.

If sufficient finances are not there, the plant should NOT be allowed to run.

Thank you,

Thomas Gurdziel
Member, ASME

It probably would be worthwhile to challenge their upper management structure and performance as well.

And, what about Santee Cooper?
