TABLE 1

Palisades "A" Steam Generator Eddy Current Test Results

A comparison of indications observed at support plate locations during the February 1975 eddy current inspection with those observed at the same locations during the summer 1974 inspection.

- (a) The readings asterisked (\*) are duplicate readings.
- (b) The summer 1974 data is an average of the June and July 1974 data.
- (c) The percent defect is listed in ascending order, not in the order taken.

TABLE 2

Palisades "B" Steam Generator Eddy Current Test Results

A comparison of indications observed at support plate location during the February 1975 eddy current inspection with those observed at the same location during the summer 1974 inspection.

- (a) The readings asterisked (\*) are duplicate readings.
- (b) The summer 1974 data is an average of the June and July 1974 data.
- (c) The percent defect is listed in ascending order, not in the order taken.

Footnotes to Table 3

- (a) This table lists all tubes with defects determined in accordance with Technical Specifications 4.14.5 (averaging method) to be greater than or equal to 50% and which were subsequently plugged. Also, included in the table are a few additional tubes which have not been greater than or equal to 50% but were also plugged.
- (b) This table lists only the maximum defect. If more than one defect occurred in a tube, only the largest defect is presented in the table.
- (c) The following abbreviations are used in addition to numeric levels:
- HLB - Hot Leg Bend  
EC - Egg Crate  
HLBCL - Defect Between Hot and Cold Leg Bends
- (d) The percent defects are listed in ascending order, not in order taken.
- (e) This reading was taken in December 1974.
- (f) Examination of data indicated it would be prudent to plug this tube.
- (g) This tube was plugged by mistake.
- (h) Since only two readings were taken, the highest reading was used to determine plugging requirements.

Categorization of Defects

90 - 99%	0
80 - 89%	5
70 - 79%	12
60 - 69%	41
50 - 59%	144
Less Than 50%	<u>3</u>
Total	205

Table 4 (Contd)Footnotes to Table 4

- (a) This table lists all tubes with defects determined in accordance with Technical Specifications 4.14.5 (averaging method) to be greater than or equal to 50% and which were subsequently plugged. Also, included in the table are a few additional tubes which have not been greater than or equal to 50% but were also plugged.
- (b) This table lists only the maximum defect. If more than one defect occurred in a tube, only the largest defect is presented in the table.
- (c) The following abbreviations are used in addition to numeric levels:
- HLB    - Hot Leg Bend  
EC     - Egg Crate  
HLBCL - Defect Between Hot and Cold Leg Bends
- (d) The percent defect is listed in ascending order, not in order taken.
- (e) This reading was taken in December 1974.
- (f) Examination of data indicated it would be prudent to plug this tube.
- (g) This tube was plugged by mistake.
- (h) Since only two readings were taken, the highest reading was used to determine plugging requirements.

Table 5

TUBES WITH AN INDICATION  $\geq 50\%$  WHICH, WHEN AVERAGED WITH ADDITIONAL READINGS, WERE BELOW 50% AND REMAIN IN SERVICE FOLLOWING THE FEBRUARY 1975 PALISADES "A" STEAM GENERATOR INSPECTION
