PALISADES PLANT, ER-76-14

By letter dated May 25, 1976 we transmitted an Event Report relating to removing a diesel generator from service. As part of the corrective action associated with that event, we stated that we were reviewing possible procedure changes which would utilize a checklist for removing safety-related equipment from service.

By letter dated June 24, 1976, we advised you that this corrective action would not be completed by July 1, 1976 as originally planned but that we expected it to be completed about August 1, 1976. Proposed corrective action has been submitted to our Plant Review Committee for review and a number of comments have been received. We now find that some additional time will be required to complete this corrective action and now estimate that it will be completed late in August 1976. We regret this further delay but conclude that it is required to insure an acceptable corrective action. We will make every effort to assure that no further delays will occur.

David A. Bixel (Signed)

David A. Bixel
Assistant Nuclear Licensing Administrator
