Mrs. McLaughlin,

Reactor status report.

Works perfectly. I had a nice conversation with your today.

By the way, thanks for your service with being a US gov employee. It is a very difficult position and I thank you very much for your hard work. All of you. Don't tell anyone, I love my government with all my heart no matter what party is in control. Keep your chin up in these very difficult times. We are all depending on you in this crisis!!!

The Democrats have come to town. As you know, the US House is the boss of the NRC. They control your budgets. I would expect to see a increase turnover of your senior leadership.

I can't begin to tell how bad it would be if we had a nuclear crisis within our national collapse of faith in our institutions and our President Trump problems. I hope all you employees won't go down in history, as our government was tittering on the edge of the cliff, you let a large nuclear accident to develop in our perilous time.

When TMI occurred in 1979, I was stationed on a experimental fast attack nuclear submarine in the Mediterranean. Believe me, as a stupid young navy sub sailor, the world and especially the USA was in a mess in 1979. I never want to ever hear again, in a set up to a terrible national nuclear power plant crisis that ruined the nuclear industry, the NRC was horrendously dysfunctional and all the insiders new it.

I'd hope you would be talking to the House politicians in some way to change the arc of moral history. One person can change history. We will all get through this for the better.

Could you please put my email in Adams.

Sincerely,

Mike Mulligan
