SUMMARY

NRC staff contacted Orano to request additional information regarding a drawing change implementing a new material for fabricating fusible plugs for the Model No. TN-RAM transportation package (Docket No. 01709233) impact limiters. NRC staff informed Orano that the material description on the drawing provided with the December 4, 2018 application was too vague. NRC staff explained that Orano needed either to provide more specificity with respect to the grade of material used to fabricate the fusible plug or to provide the specific properties which the new material must possess. NRC staff informed Orano that this information was needed to satisfy the requirements of 10 CFR 71.33(a)(5).
