General Comment

I support new Training and experience requirement for such radiopharmaceuticals as Radium 223 (Xofigo). This drug is administered in our office but requires a nuclear medicine physician or a radiation oncologist. Both are in short supply. The compound is a Alpha particle and with proper storage is background radiation in 14 days. In order to allow our patients timely access to such compounds, urologists who already administer cytologic chemotherpapis and other compounds should be allowed to complete training for administration. Please consider opening access to the delivery of such compounds.

Thank you.
