## General Comment

I am the Manager of two Nuclear Medicine labs in the Milwaukee area. Advocate Aurora St. Luke's Medical Nuclear Medicine lab does about 8500 high quality procedures a year. The quality is directly proportional to the physicians that we serve. They demand excellence as they should. Our AUs cover numerous sites and have a wealth of experience in Nuclear Medicine. Those experienced AUs drive the quality to be better and better. They are always looking for ways to do best practice and provide the best quality Nuclear Medicine service possible. By slacking those requirements, you will find a dramatic drop in the quality of Nuclear medicine services. Our patients deserve better- PLEASE reconsider the decision to do this. It takes years to be able to be an expert in this field. Lowering the AU requirement training will be detrimental to patients the livelihood of our caregivers and to Nuclear Medicine practices as a whole.
