## General Comment

As a patient I want to have a physician taking care of me who is completely trained in all areas of nuclear medicine and not only one area. I would be happy to travel to the closest larger academic center with a competent nuclear medicine department which has the infrastructure and expertise including access to newer investigational therapies. Delegating nuclear medicine therapies to local hospitals without nuclear medicine trained physicians is dangerous and against high quality of health care.

Thank you for the opportunity to provide comments from a patient perspective.
