						HU2.1 (Bases Pg. 121) 1 2 3 4 5 6 DEF																																																	
						Seismic event > OBE as indicated by Seismic Activity, Annunciator 99D.																																																	
						Hazardous event.																																																	
						HU3.1 (Bases Pg. 123) 1 2 3 4 5 6 DEF																																																	
						A tornado strike within the PROTECTED AREA.																																																	
						HU3.2 (Bases Pg. 124) 1 2 3 4 5 6 DEF																																																	
						Internal room or area FLOODING of a magnitude sufficient to require manual or automatic electrical isolation of a SAFETY SYSTEM component needed for the current operating MODE.																																																	
						HU3.3 (Bases Pg. 126) 1 2 3 4 5 6 DEF																																																	
						Movement of personnel within the PROTECTED AREA is IMPEDED due to an offsite event involving hazardous materials (e.g., an offsite chemical spill or toxic gas release).																																																	
						HU3.4 (Bases Pg. 127) 1 2 3 4 5 6 DEF																																																	
						A hazardous event that results in on-site conditions sufficient to prohibit the plant staff from accessing the site via personal vehicles. (Note 7)																																																	
						FIRE potentially degrading the level of safety of the plant.																																																	
						HU4.1 (Bases Pg. 128) 1 2 3 4 5 6 DEF																																																	
						A FIRE is not extinguished within 15 min. of any of the following FIRE detection indications. (Note 1) <ul style="list-style-type: none"><li>Report from the field (i.e., visual observation).</li><li>Receipt of multiple (more than 1) fire alarms or indications.</li><li>Field verification of a single fire alarm.</li></ul> AND																																																	
						The FIRE is located within any Table H-1 area.																																																	
						HU4.2 (Bases Pg. 131) 1 2 3 4 5 6 DEF																																																	
						Receipt of a single fire alarm (i.e., no other indications of a FIRE). AND																																																	
						The fire alarm is indicating a FIRE within any Table H-1 area. AND																																																	
						The existence of a FIRE is not verified within 30 min. of alarm receipt. (Note 1)																																																	
						HU4.3 (Bases Pg. 134) 1 2 3 4 5 6 DEF																																																	
						A FIRE within the plant PROTECTED AREA not extinguished within 60 min. of the initial report, alarm or indication. (Note 1)																																																	
						HU4.4 (Bases Pg. 135) 1 2 3 4 5 6 DEF																																																	
						A FIRE within the plant PROTECTED AREA that requires firefighting support by an offsite fire response agency to extinguish.																																																	
				Gaseous release IMPEDED access to equipment necessary for normal plant operations, cooldown or shutdown.																																																			
				HA5.1 (Bases Pg. 136) 1 2 3 4 5 6 DEF																																																			
				Release of a toxic, corrosive, asphyxiant or flammable gas that prohibits or IMPEDES access to EITHER of the following. (Note 5) <ul style="list-style-type: none"><li>North Electrical Penetration Room. (Room 1410)</li><li>South Electrical Penetration Room. (Room 1409)</li></ul>																																																			
		Inability to control a key safety function from outside the Control Room.		Control Room evacuation resulting in transfer of plant control to alternate locations.																																																			
		HS6.1 (Bases Pg. 139) 1 2 3 4 5 6 DEF		HA6.1 (Bases Pg. 138) 1 2 3 4 5 6 DEF																																																			
		An event has resulted in plant control being transferred from the Control Room to the Auxiliary Shutdown Panel (ASP).		An event has resulted in plant control being transferred from the Control Room to the Auxiliary Shutdown Panel (ASP).																																																			
		Control of any of the following key safety functions is not re-established within 15 min. (Note 1): <ul style="list-style-type: none"><li>Reactivity control (MODE 1, 2 and 3 only).</li><li>Core cooling.</li><li>RCS heat removal.</li></ul>																																																					
Other conditions existing that in the judgment of the Emergency Coordinator warrant declaration of General Emergency.		Other conditions existing that in the judgment of the Emergency Coordinator warrant declaration of Site Area Emergency.		Other conditions existing that in the judgment of the Emergency Coordinator warrant declaration of an Alert.		Other conditions existing that in the judgment of the Emergency Coordinator warrant declaration of a UE.																																																	
HG7.1 (Bases Pg. 140) 1 2 3 4 5 6 DEF		HS7.1 (Bases Pg. 144) 1 2 3 4 5 6 DEF		HA7.1 (Bases Pg. 142) 1 2 3 4 5 6 DEF		HU7.1 (Bases Pg. 141) 1 2 3 4 5 6 DEF																																																	
Other conditions exist which in the judgment of the Emergency Coordinator indicate that events are in progress or have occurred which involve actual or IMMINENT substantial core degradation or melting with potential for loss of containment integrity or HOSTILE ACTION that results in an actual loss of physical control of the facility. Releases can be reasonably expected to exceed EPA Protective Action Guideline exposure levels offsite for more than the immediate site area.		Other conditions exist which in the judgment of the Emergency Coordinator indicate that events are in progress or have occurred which involve actual or likely major failures of plant functions needed for protection of the public or HOSTILE ACTION that results in intentional damage or malicious acts. (1) that prevent effective access to equipment needed for the protection of the public. Any releases are not expected to result in exposure levels which exceed EPA Protective Action Guideline exposure levels beyond the SITE BOUNDARY.		Other conditions exist which, in the judgment of the Emergency Coordinator, indicate that events are in progress or have occurred which involve an actual or potential substantial degradation of the level of safety of the plant or a security event that involves probable life threatening risk to site personnel or damage to site equipment because of HOSTILE ACTION. Any releases are expected to be limited to small fractions of the EPA Protective Action Guideline exposure levels.		Other conditions exist which in the judgment of the Emergency Coordinator indicate that events are in progress or have occurred which indicate a potential degradation of the level of safety of the plant or indicate a security threat to facility protection has been initiated. No releases of radioactive material requiring offsite response or monitoring are expected unless further degradation of SAFETY SYSTEMS occurs.

Table C-6 Hazardous Events

- EXPLOSION
- FIRE
- HIGH WINDS or tornado strike
- Internal or external FLOODING event
- Seismic event (earthquake)
- Other events with similar hazard characteristics as determined by the Emergency Coordinator

Notes

Note 1: The Emergency Coordinator should declare the event promptly upon determining that time limit has been exceeded, or will likely be exceeded.

Note 6: If CONTAINMENT CLOSURE is re-established prior to exceeding the 30-minute time limit, declaration of a General Emergency is not required.

Note 10: Begin monitoring hot condition EALs concurrently for any new event or condition not related to the loss of decay heat removal.

Note 11: If the affected SAFETY SYSTEM train was already inoperable or out of service before the hazardous event occurred, then this emergency classification is not warranted.

Note 12: If the hazardous event only results in VISIBLE DAMAGE with no indications of degraded performance to at least one train of a SAFETY SYSTEM, then this emergency classification is not warranted.
