Hope Creek Generating Station
Renewed Facility Operating License No. NPF-57
NRC Docket No. 50-354

Subject: **Supplement to Submittal of Relief Request Associated with the Third Inservice Inspection (ISI) Interval**

Reference 1: LR-N18-0087, "Submittal of Relief Request Associated with the Third Inservice Inspection (ISI) Interval," dated September 24, 2018

On September 24, 2018, PSEG Nuclear LLC (PSEG) submitted a relief request associated with the third Inservice Inspection (ISI) interval to Renewed Facility Operating License No. NPF-57 for Hope Creek Generating Station (Reference 1). This letter corrects a typographical error in Enclosure 1 of the referenced letter.

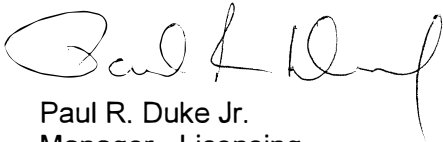

On page 49 of Enclosure 1 in Relief Request No. HC-I3R-08, PSEG discusses the basis for the alternate EVT-1 visual examinations that were performed on three of the recirculation inlet nozzles, one of the low pressure coolant injection (LPCI) nozzles, and one of the core spray nozzles. ASME Code N-648-1 was used as the basis for those examinations. Page 49 states that PSEG performed the surface area coverages for the visual examinations in accordance with surface area coverages defined in Figure IWC-2500-7(b) of the 2001 Edition of ASME Section XI. The figure referenced should be IWB-2500-7(b) instead of IWC-2500-7(b). This is aligned with the code case referenced, N-648-1.

The typographical error does not affect the statements made in the Reference 1 submittal concerning the proposed alternative and basis for use.

There are no regulatory commitments contained in this letter.

If you have any questions or require additional information, please contact Mr. Lee Marabella at (856) 339-1208.

Respectfully,

A handwritten signature in black ink, appearing to read "Paul R. Duke Jr.", with a stylized, cursive script.
