2. IMC 0609 App H	05/06/04	IMC 0609 App H	02/25/19

TRAINING: No special training is required for any documents issued with this Change Notice.

REMARKS: IMC 0310, "Aspects Within the Cross Cutting Areas," has been revised based on the title change to IMC 0612 and other edits based on the NRC Style Guide, NUREG-1379

IMC 0609 Appendix H, "Containment Integrity Significant Determination Process," has been revised to remove all references to obsolete Phase 2 system notebooks, add SRA to the list of people that can perform a Phase 3 analysis, add a reminder that SAPHIRE can now be used to perform LERF calculations, remove the step to multiply the LERF score by a factor of 3.3 from table 5.3 (now Table 6.3) since it is not correct to do so, revise Figure 5.1 (now Table 6.1) so it no longer mentions SDP Phase 2 notebooks, provide new definitions for "close in population" and "effective evacuation," create a new Attachment 1 to provide guidance for assessing the timing of protective actions in detailed risk evaluations, address feedback form 0609H-2225, add a new section (Section 0609H-05) for C-SGTR, and revised Table 6.1 to add a row for Combustion Engineering plants. As a result of adding section 0609H-05, subsequent sections and table numbers were changed. Table 7.1 has been revised to add a new column for ice condenser flow blockage. Added a note to Tables 7.2 and 7.4 to provide more information on failure of multiple igniters for Ice Condenser and BWR Mark III plants. Added a new Section 01.05 regarding the use of licensee-provided LERF information. Revised definition for shutdown operation to better align with IMC 0609, Appendix G.
