**Subject:** [External\_Sender] Relicensing Seabrook plant  
**Date:** Tuesday, February 26, 2019 5:48:49 PM

---

Off the MA coast, not far from the Seabrook plant, there will be offshore windturbines built soon. Over the next 5years the Pilgrim Nuke will be shut down and power will be coming in from solar and wind instead. With proper planning hundreds of wind turbines off shore and solar arrays on land ocan provide the needed electricity for our region.

We need safe and clean renewable power intead of aging nuclear facilities.solar and wind provide more local jobs than nucler power plants and when they need repairs it is not a dire emergency or potential health hazard for millions of people who live near the Seabrook plant!

We also need to localize our energy production and grid for security reasons.

Please do NOT renew Seabrooks's license.

Sincerely,

Emma Stamas
