EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 2 | At about 1630 9/11/79, Combustion Engineering (CE) informed the Plant Nuclear  
0 3 | Engineer that Technical Specification Figure 3.2-4 was non-conservative in that  
0 4 | the curve's coordinates at 80% rated thermal power should be  $\pm .30$  instead of  
0 5 |  $\pm .35$  ASI units. Should the reactor have been operating outside of the correct  
0 6 | curve at the time of occurrence of the limiting postulated accident/A00, that  
0 7 | event would not have been previously analyzed for.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 0 An ambiguity in the rendering of the curve on Figure 3.2-4, initiated by CE in

1 1 support of Cycle Four Operation, was not clarified during the chain of reviews

1 2 between CE, BG&E, and NRC and resulted in the issue of a non-conservative Technical

1 3 Specification by NRC. Plant Operations staff will use the correct and more

1 4 conservative curve in lieu of Figure 3.2-4, until correct curve is issued by NRC.
