02 During load reduction in preparation for plant shutdown, the volume  
03 control tank was being vented to the waste gas surge tank in order to  
04 degas the PCS. Leakage from the surge tank resulted in a gaseous release  
05 without the 15-day holdup time required by TS 3.9.17. Upon discovery  
06 VCT venting was stopped. Total activity release was 4.314 curie which  
07 is 5.7 percent of annual limit. No hazard to public health or safety  
08 resulted.
