EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 2 At about 1630 on 9/11/79, Combustion Engineering (CE) informed the Plant Nuclear
0 3 Engineer that Technical Specification Figure 3.2-4 was non-conservative in that
0 4 the curve's coordinates at 80% rated thermal power should be + .30 instead of
0 5 + .35 ASI units. A review of all ASI data recorded on plant computer INCORE type-
0 6 writer since this cycle start-up confirms that the reactor has been operated within
0 7 the more conservative, correct limits. Consequently, the plant has been operated
0 8 within the scope of the safety analysis.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 0 An ambiguity in the rendering of the curve on Figure 3.2-4, initiated by CE in
1 1 support of Cycle Four Operation, was not clarified during the chain of reviews
1 2 between CE, BG&E, and NRC and resulted in the issue of a non-conservative Technical
1 3 Specification by NRC. Plant Operations staff will use the correct and more
1 4 conservative curve in lieu of Figure 3.2-4 until correct curve is issued by NRC.
