## TMI-I OPERATING SUMMARY

JULY 1978

The Unit operated at essentially 100% full power the entire month except for the following planned reductions.

On July 3rd and 4th, the Unit reduced power to 90% due to a reduced system load requirement. These reductions lasted approximately 4.5 hours and 2.75 hours respectively, after which the Unit escalated back to 100% full power.

On July 19, 1978, the Unit reduced power to 95% to perform Physics testing (Reactivity Coefficients). This planned reduction lasted 0.75 hours.

## MAINTENANCE SUMMARY

The casing vent line on makeup pump (MU-P-1A) required repairs because of a fitting leak. MU-P-1A was taken out of service after the other make up pumps were aligned for normal operation. The following work was performed:

1. Vent line removed
2. Repair vent line
3. Installed vent line
4. MU-P-1A tested

After the MU-P-1A was tested satisfactorily, the pump was returned to service.
