Mr. L. Manning Muntzing  
Director of Regulation  
Directorate of Licensing  
Office of Regulation  
U. S. Atomic Energy Commission  
Washington, D. C. 20545

Dear Mr. Muntzing:

Subject: Three Mile Island Nuclear Generating  
Station, Unit 1  
Docket No. 50-289  
Request for Amendment to Operating  
License No. DPR-50  
Technical Specification Change Request No. 4

Pursuant to Title 10, Code of Federal Regulations, Section 50.59, three signed originals and 37 conformed copies of Metropolitan Edison Company's request for amendment to Appendix A of Operating License No. DPR-50 for the Three Mile Island Nuclear Generating Station, Unit 1, incorporating Technical Specification Change Request No. 4, are herein submitted.

The enclosed analysis and Technical Specification Change Request are being submitted by Metropolitan Edison Company (Met-Ed) to bring the Three Mile Island Nuclear Generating Station, Unit 1 reactor into conformance with the requirements set forth in Title 10, Code of Federal Regulations, Section 50.46 and the Staff "Determination of Request for Extension of Time for Submittal of Evaluations Required by Acceptance Criteria for Emergency Core Cooling Systems", dated August 5, 1974.

The enclosed Technical Specification Change Request and the supporting B&W Topical Reports (BAW-10091-10095) have been reviewed by GPU Service Corporation, acting for Met-Ed, and Met-Ed is satisfied that both the B&W ECCS Analysis and the enclosed Technical Specification Change Request are in accordance with 10CFR50.46 and 10CFR50, Appendix K. The analyses result in some limits which are more restrictive, and other limits which are less restrictive than the presently existing Technical Specifications. Until such time as the Commission may approve less restrictive operating limits as contained herein, we have since August 5, 1974, and will continue, to operate TMI-1 under administrative controls to conform to the more restrictive limitations of both the presently existing Technical Specifications and those contained in the enclosed Technical Specifications Change Request.

It should be noted that contrary to the Staff's "Determination of Request for Extension" the licensee was unable to obtain the ECCS evaluation and analysis from the NSSS vendor, Babcock & Wilcox on August 1, 1974 and, in fact, did not receive it until August 5, 1974. Consequently, there was less opportunity for

1587 002

Mr. L. Manning Muntzing

- 2 -

various committee reviews required on the part of the Licensee and significantly less time for these reviews than was provided for in the six weeks requested in the Extension Request. It is presently anticipated that the additional committee reviews required by the Technical Specifications will be completed by September 11, 1974, at which time we will inform you of the results of these reviews.

Sincerely,

R. C. Arnold  
Vice President
