Mr. A. Giambusso  
Deputy Director for Reactor Projects  
Directorate of Licensing  
Office of Regulation  
U. S. Atomic Energy Commission  
Washington, D. C. 20545

Dear Mr. Giambusso:

Operating License DPR-50  
Docket No. 50-289

Proposed Change #1  
to Technical Specifications  
for TMI Unit 1

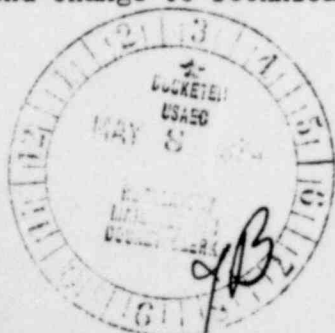

We have reviewed the Technical Specifications which we received with our Operating License on April 19, 1974, and would like to propose a change to Technical Specification 3.4.3 as hereinafter described.

Technical Specification 3.4.3 requires that the turbine-driven emergency feedwater pump and two half-sized motor-driven emergency feedwater pumps be operable whenever the reactor coolant system is heated above 250°. Motor-driven emergency feedwater pump EF-P2A is presently undergoing repairs and will probably not be operational until after the scheduled date for RCS heatup. For this reason we propose that Technical Specification 3.4.3 be rewritten to read as follows:

"3.4.3 The turbine-driven emergency feedwater pump and one half-sized motor-driven emergency feedwater pump shall be operable."

To effect this proposed change, we request that you approve and issue to us the attached page 3-25 of the Technical Specifications as a replacement for the existing page 3-25 issued 4/19/74.

Prior to completion of zero power physics testing, we will propose a second change to Technical Specification 3.4.3, which will reinstate the

specification as originally written. We believe this to be a reasonable course of action based on the fact that there will be no significant decay heat as a result of zero power physics testing, during which reactor power will not exceed five percent of full rated power.

Sincerely,

WALTER M. CREITZ  
President
