DOLKET NUMBER EVENT DATE REPORT DATE

EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 2 | At 1150 the containment atmosphere particulate radioactivity monitoring system (R-11)
0 3 | and the containment atmosphere gaseous radioactivity monitoring system (R-12) were
0 4 | declared inoperable to replace the vacuum pump after the pump kept tripping on low
0 5 | flow. Tech. Spec. 3.4.6.1 requires R-11 and either R-12 or a containment air cooler
0 6 | condensate level monitoring system to be operable. All Tech. Spec. requirements were
0 7 | met. R-11 and R-12 were returned to an operable status at 1540 on 6/13/78. The health
0 8 | and safety of the public were not affected.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 0 Pump flow rate degraded. Flow rates were adjusted after initial tripping of the pump.

1 1 When the pump continued to trip on low flow it was replaced. The flow trip setpoint

1 2 was not adjusted. A design change to add a second vacuum pump in parallel has been

1 3 implemented. (Similar occurrence reported in LER 78-035/03L-0)
