General Comment

Nuclear power remains one of the great untapped hopes of renewable power in the 21st century and beyond. While America's foray into this realm has been half-hearted and sporadic, we should support the continuation of current efforts to utilize nuclear energy to power our nation's grid. The license issuance, as not affecting the current safety levels of the plants, undoubtedly should be issued.

The maintenance and support of our nation's current nuclear energy array should be continued until expansion can be enabled. The Browns Ferry Nuclear Plant, as the nation's second most powerful nuclear energy generator, should continue to be supported by the Tennessee Valley Authority, the Nuclear Regulatory Commission, our policymakers and the public as we continue to develop the science behind nuclear energy and expand the economic, regulatory, and social support for it.
