Blanket

What is Ceramic Fiber Blanket?

Ceramic Fiber Blankets are manufactured from spun ceramic fiber and is needed to provide exceptional handling strength for high temperature insulation applications. Blanket is typically offered in three standard grades

referred to as commercial, High-Purity, and Zirconia grade. All grades are lightweight and thermally efficient resulting in a material that has the advantage of low heat storage and complete resistance to thermal shock. Blanket is produced in varying dimensions, temperature ratings, and for different applications. Our office also supplies Bio-Soluble blanket which is environmentally friendly. If you don't see a specific blanket listed, please contact us directly and we will be happy to provide a custom quote.

Stocking Locations

Dallas, TX | Los Angeles, CA | Wilmington, CA | Hayward, California | Tualatin, Oregon | Elk Grove, IL

BENEFITS

Dimensionally stable at high temperatures.

Low heat storage and complete resistance to thermal shock.

Lightweight and thermally efficient.

APPLICATIONS

Furnace repair

Furnace, kiln, reformer and boiler linings

Furnace door linings and seals

Reusable insulation for steam and gas turbines

High-temperature kiln and furnace insulation

Primary reformer heater insulation

High temperature gasketing

Expansion joint seals

Glass furnace crown insulation

Field steam generator lining.

Nuclear insulation applications
