*Your Insulation Specialists for:
Pipes • Boilers • Equipment • Ducts • Fire Stopping • Fabrications*

Marinite® Board Insulation

Marinite® Board Insulation

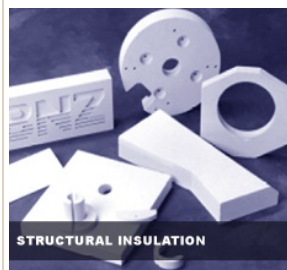

Marinite I thermal structural board insulation is a non-asbestos fire-resistant material manufactured in 4'x8' panel form. These boards are designed to combine structural strength and high thermal insulating values in a variety of fireproofing and heat processing equipment applications. Formed from calcium silicate with inert fillers and reinforcing agents, Marinite I panels provide structure and insulation in a single, easily erected material.

In addition to high strength and excellent thermal insulating characteristics, Marinite I structural insulation is highly damage-resistant, non-corroding, and extremely water-resistant. Marinite panels also provide fire safety, uniform temperature control, minimal maintenance, and fast, easy fabrication.

Marinite I can be used in fire safety applications such as fire stops, fire walls, cable trays and fire doors. The maximum service temperature is dependent upon the application.

Advantages:

- Uniform temperature control
- Eliminates refractories
- Easily erected
- Fire safety
- Minimal maintenance
