60 61 DOCKET NUMBER 68 69 EVENT DATE 74 75 REPORT DATE 80

EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 2 | Met-Ed was informed on 6-26-79, by their consultant, that a sample of sediment  
0 3 | showed levels in excess of 10 times control station value for the isotope Co-58.  
0 4 | The indicator station (11A1) value was  $1.19 \pm 0.12$  pCi/gm, dry; and the control  
0 5 | station (1A2) level was  $<0.09$  pCi/gm, dry. This is reportable per Technical  
0 6 | Specification, Appendix B, Section 5.6.2.2.a.(1). The event is not considered  
0 7 | detrimental to the health and safety of the public due to the limited quantities  
0 8 | found.

[illegible]

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

10 It is believed that the reason for the increased concentration was that, following  
11 the Unit II accident, increased volumes of Unit I liquid radioactive waste were  
12 processed to make available space for Unit II water in the event the space would be  
13 needed. Since the increased sediment activity is believed to be due to a unique  
14 situation, no corrective action is planned.
