July 10, 1979

NEWS RELEASE

Save The Valley now has a number of sworn statements from workers at Marble Hill regarding a series of situations that could obviously adversely affect the health and safety of all of us in this entire region.

STV observes that this activity has been time consuming and expensive. STV feels that this activity involved only simple and basic investigative techniques. We cannot understand why the Federal government (the U. S. Nuclear Regulatory Commission) did not develop this information for themselves at the times these things were occurring.

STV knows that there are other employees at Marble Hill who want to give information but STV cannot continue to develop information at this pace. STV feels that in light of this situation the Federal government (NRC) might have made a grave error in letting further construction at Marble Hill proceed at this time with what appears to be only a cursory investigation of the situation at Marble Hill.
