Director of Nuclear Reactor Regulation
Attn: Brian K. Grimes, Assistant Director
Engineering and Projects
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Sir:

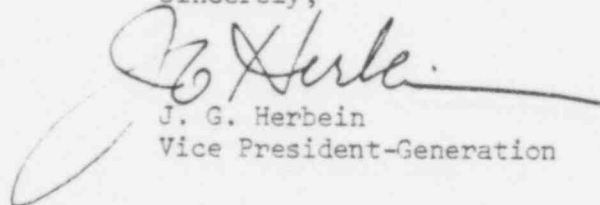

Three Mile Island Nuclear Station, Unit 1
Operating License No. DPR-50
Docket No. 50-289
Radiological Effluent Technical Specifications

On April 28, 1979 a request was made to extend the date of submittal of the subject draft until July 15, 1979. Because of the continued involvement of the health physics and chemistry personnel in the TMI-2 Recovery and the many inquiries from investigating bodies, Met-Ed will be unable to meet the July 15, 1979 date. However, Met-Ed will be able to submit the draft Radiological Effluent Technical Specifications by August 1, 1979.

Therefore, Metropolitan Edison Company is requesting Commission approval of a 15 day extension.

Your consideration in this matter is appreciated.

Sincerely,

J. G. Herbein
Vice President-Generation
