King of Prussia, Pennsylvania 19406

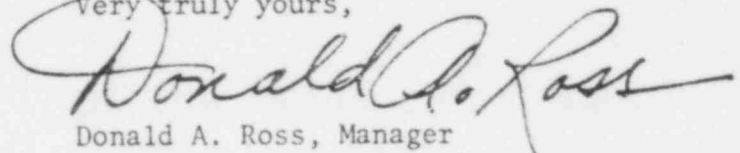

Dear Mr. Grier:

Subject: Oyster Creek Nuclear Generating Station  
Docket No. 50-219  
Effluent Release Report No 78-2, Addendum 1

By letter dated March 1, 1979, we submitted Effluent Release Report No. 78-2 for the Oyster Creek station. It was indicated in this report that Strontium-89 and Strontium-90 release data had not been provided because of delays in the radiochemical analyses of various effluent samples and that this data would be forwarded when all analyses were completed.

Enclosed are two (2) copies of Addendum 1 to Effluent Release Report No. 78-2 which provides the results of the Strontium analyses. The enclosed addendum completes Effluent Release Report No. 78-2 submitted in accordance with Section 6.9.3 of the Oyster Creek Technical Specifications of Provisional Operating License DPR-16.

Very truly yours,

Donald A. Ross, Manager  
Generating Stations, Nuclear
