Mr. K. V. Seyfrit, Director
U. S. Nuclear Regulatory Commission
Office of Inspection and Enforcement
Region IV
611 Ryan Plaza Drive
Suite 1000
Arlington, Texas 76011

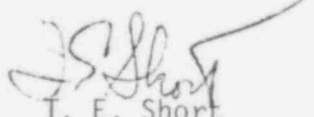

Reference: Docket No. 50-285

Dear Mr. Seyfrit:

The Omaha Public Power District received IE Bulletin 79-14 requesting that information be provided and inspections performed relative to seismic analyses for Fort Calhoun Station seismic category 1 piping systems. Accordingly, the District has begun expediting the requirements of the Bulletin; however, current projections indicate that this work will require much more time to accomplish than specified in the bulletin. It is currently estimated that item 1 will require approximately 30 man-weeks to complete due to the extensive records search which must be performed. Item 2 will require approximately 120 man-weeks to complete, and item 3 approximately 200 to 300 man-weeks. These estimates take into account: indoctrination and training, preparation of procedures, scaffolding rigging, radiation protection measures, general accessibility considerations, potential for large radiation dosage, documentation requirements, and contingencies.

The District will continue to make an honest effort to comply with the bulletin, notwithstanding the considerable manpower and financial commitments involved. We will keep you advised of our progress.

Sincerely,

T. E. Short
Assistant General Manager
