ATTENTION: Mr. C. E. Murphy

Gentlemen:

The Georgia Power Company wishes to submit the following information concerning the noncompliance discussed in your inspection report number 50-424/79-9 and 50-425/79-9.

A nonconformance report, NCR CD-350, which addressed the out of tolerance concrete, was written on May 16, 1979. The NCR was subsequently closed on a "use as is" disposition approved by the Bechtel Resident Engineer.

The Project Engineering Staff member that was responsible for the placement of concrete that was out of tolerance has been transferred from the Vogtle Nuclear Plant site. Further, it has been re-emphasized to site personnel that the requirements of procedures and specifications must be followed to preclude the recurrence of this type of action.

Training sessions relating to nonconformance reporting have been conducted at the site training facility. Attendees have included personnel from the Quality Assurance, Quality Control, and Engineering sections.

Full compliance has been achieved.

The information contained in the inspection report is not considered to be proprietary.

Very truly yours,

  
R. W. Staffa  
Manager of Quality Assurance
