While shutdown in a cold condition, during the conduct of Operations Surveillance Test F-ST-12B titled "Reactor Building Exhaust Monitor Functional Test" to satisfy the requirements of Technical Specification Appendix A, Paragraph 3.2.D.3, the "B" Reactor Building Exhaust Monitor (17-RIS-452B) was found out of calibration. The redundant instrument (17-RIS-452A) was verified operable, therefore the event did not represent any significant hazard to the public health and safety.

The instrument was recalibrated and satisfactory operation was demonstrated by the successful completion of F-ST-12B later the same day.
