Dear Sir:

Re: Final Environmental Report for Grand Gulf Nuclear
Station Units 1 and 2 in Claiborne County,
Mississippi

We have reviewed the subject statement concerning the operating stage
for Units 1 and 2 of the Grand Gulf Nuclear Station.

Natural gas, sand and gravel, and dimension stone have been produced
in the past in Claiborne County. The proposed project should have
little effect on the mineral resources of the area, and will provide
power which may be of benefit to the mineral industry.

We believe the statement is adequate.

Sincerely yours,

Robert D. Thomson, Chief
Eastern Field Operations Center
