EVENT DESCRIPTION

02	Investigation has revealed that loss of the air supply to the containment building																							80
03	purge isolation valves (CV-1803, -1805, -1806, -1807, -1813 and -1814) will result																							80
04	in depressurization of the seal rings which could cause loss of containment integrity.																							80
05	This failure mode had not been considered in the FSAR. Seal pressures are being																							80
06	checked once per shift to verify operability of seal ring air supply. (ER-77-045)																							80
	corrected																							80

CAUSE DESCRIPTION

08	The valves (Continental Equip/Type 9220) are not provided with a redundant air																							80
09	supply to maintain seal ring pressure. A redundant air source will be provided as																							80
	soon as feasible.																							80
